## **LEEP – Spring Training Update** Overview of LEEP activities and focus on upcoming LEEP products

Monday April 15th, 2019 Hockley Valley, Ontario

Patric Langevin, LEEP Facilitator and Technical Lead Natural Resources Canada, CanmetENERGY

# 2018/19 LEEP Delivery - 9 verview gh performance LEEP field trials completed in BC led over 1000 industry participants to learn about new technological advances of view LEEP 1 and 2 day events in 7 Provinces.

- 30 High performance LEEP field trials completed in BC
- Enabled over 1000 industry participants to learn about new technological advance
- 3 LEEP Innovation Exchanges (Prince George, Kelowna, Vancouver all 1 damme text
   Presentations on field trials learnings 27 from builder volutions on on reld trial results + 3 energy advisors on integrated design + 3 on high performance envelopes building science + 3 on more harded is size and design Presentations on field trials rearrange 2 + 3 on motion ical sizing and o performance envelopes building science + 3 on motion ical sizing and o day. Victorial (2 day ruanaimo – 1 day)
- 3 LEEP Technology Forums (Surrey 2 day, Victoria 2 da
  - 8 manufacturer presentations, ex e e ope and mechanical system presenction HTAP Presentation
  - High builder interest in particing in gin second round of LEEP field trian
  - 4 LEEP for Renovators Price EV shops + 2 Technical Forums (Enveloped Mechanicals) 🛤 (all in London – 2 renovator planning
    - Technical Sector on the Why and the How of EP nergy renovation (Whole home, env nanicals) + ob
    - 9 Manufecturers developed and presented services for deep energy retrofit 4 on F ven be tems plus 5 on mechanicals systems
    - Brought stakeholders together for a Fan hawe College proposed Deep Ener ploying 5 competing approaches.
  - 5 LEEP Gas Mechanical Forums (Toronto, Saskatoon, Regina, Edmonton, Calua
    - ide for Gas Mechanical Systems Added new sections and finalized the Master Planning & De
    - Developed an accompanying tool and mechanical trained by Stilles are using it and providing feedback 5 Manufacturers upgraded offerings and pretented adultions.

    - Similaturation of the subgraded offerings and organize of outlots.
       Developed 3 expert local panels at the organize or notication providers brought up to speed for delivery in these markets
       LEEP Atlantic Canada Builder Plantin Conshops (St. Johns, NL, Halifax, NS, Charlottetown, PEI, Fredericton, NB)
  - - Updated base case home and materials for Atlantic market and HTAP presentation, and locally selected technologies (Technology forums and workshops to follow in 2019/2020)

## The Big LEEP Takeaways - 2018

- Integrated design rarely happens, but is crucially important in high performance housing. (\$10, \$100, \$1000 rule)
- 2. High performance wall systems are challenging. (inboard/outboard ratios, vapour permeable/vapour closed, vapour retarders, vapour barriers)
- **3.** Mechanical system sizing is essential, 3<sup>rd</sup> party mechanical design preferable, coordination essential!
- 4. PV System cost of continues to drop. (\$2.50 \$3.00 per watt)

## Canada

## 1 – Integrated Design

© Her Majesty the Queen in Right of Canada, as represented by the Minister of Natural Resources, 2017

- Integrate the new technologies/systems into the design from the very beginning with the support of your client and designer;
- Make sure your Team clearly understands the systems and pays attention to the details;
- Ensure the client and Team are realistic about what the technology outcomes are expected to be;

### **NRCan Net Zero Energy Wall Guidelines**

- Series of 4 Building Science Guidelines being developed for 4 common near net zero ready wall systems, R-25 to R-40 range (e.g. 2-6" of exterior insulation on 2x6)
- Covers design & construction considerations
- Provides Effective R-value Tables
- Commentary on building Science guidance (Air, Vapour, Water) for each and rationale
- Includes cladding attachment fastener tables
- costing information
- installation checklists

esources Ressources naturelles Canada

### 2 – Mechanical System Sizing and Design: Housing is changing

- More energy efficient construction
- Lower design heating loads
- More open concept and tall homes

26

- More attached homes
- Larger windows
- Greater customer expectations

#### Mechanical systems need to adapt

#### Business-as-usual practices create "issues" for all stakeholders

| Stakeholder                         | Gas heat + A/C system – example "issues"   |
|-------------------------------------|--|
| Homeowners                          | Rooms and floors that are too hot or too cold in their NEW home.<br>Lost and unusable space due to box-outs and floor register placements.       |
| Builders                            | Comfort complaints. After-hours call backs. Hard to fix. Potential damage to reputation. Mechanicals bulkheads, box-outs and venting.            |
| Designers                           | Design services rarely used. When used, last in and 'bare-bones' designs needed 'yesterday'. Incomplete info. from builder requires assumptions. |
| Contractors                         | No specs. Need to 'wing it' / use rules-of-thumb. When things go wrong, the contractor is usually blamed. No margin in price to fix.             |
| Manufacturers                       | Large brands have focussed on retrofit market with double the sales volume and better profit margins.  |

## **Key Takeaways on Mechanicals**

1. Make sure your Team and mechanical trade clearly understands the technology and pays attention to the details;

2. Make sure you understand your clients goals around thermal comfort, system noise, and intimate relationship between the right sized equipment and the final performance outcomes of the home.

3. Engage with trades that are genuinely keen to participate and benefit from the new technology;

4. Ensure the client and Team are realistic about what the technology outcomes are expected to be;

## **Decide which technologies** you want to include

- Builder/EA can toggle either • yes or no for each technology option.
- Or, can specify discreet assembly to include (i.e. EPS, XPS, MWB, double stud)

## **Next Steps on Costing**

- Testing/refinement of spreadsheet tool (spring/summer)
- Pilot costing workshop (June 2019 in BC)
- Atlantic Canada workshop trial (Fall 2019)
