

Enbridge Gas Distribution:

A Tale of Two Utilities. Then there was one.

Susan Cudahy, Senior Advisor – Residential Program Delivery

Scott Bullock, Team Lead – Residential Energy Conservation Delivery

Union Gas and Enbridge Gas Distribution have amalgamated

As of Jan. 1, 2019, Union Gas and Enbridge Gas Distribution have amalgamated into one utility with the legal name **Enbridge Gas Inc.** For now it is business as usual and there are no changes to the services you receive from both Enbridge and Union Gas and your Gas account representatives.

Please continue to interact as you have in the past and our contact and emergency numbers have not changed.

Union Gas will transition to the Enbridge name over time, and we will keep our customers informed of any future changes

As a builder or business partner...what does this mean to me?

The current Enbridge and Union programs will continue as they are until 2020 including:

- Residential Savings by Design (SBD)
- Affordable Housing New Construction (AHNC)
- Optimum Home and Optimum Home Pilot for Smaller Builders
- Home Reno Rebate (HRR)
- Home Energy Conservation (HEC)
- Low Income Smart Thermostats
- Home Winterproofing (HWP) for Low Income
- Commercial Savings By Design and the Commercial Incentive programs

So in other words...its business as usual.

Note: Enbridge retains the right to refuse an application or to cancel or change the programs or any part thereof at any time without notice.

Enbridge Gas Distribution

Moving forward Enbridge is looking to be a major part of the Lower-Carbon Future.

Here's how:

- **Reduce emissions by helping customers use less gas**
 - Delivering energy efficiency programs or promoting new technologies like natural gas heat pumps that help customers optimize their use of natural gas
- **Reduce emissions by using more gas**
 - Replacing oil, propane and wood with clean-burning natural gas for home and water heating
 - Switching heavy-duty transportation from diesel to compressed natural gas
- **Reduce emissions by using carbon-neutral gas**
 - Blending hydrogen and Renewable Natural Gas from waste into our pipeline system
- **Reduce emissions by investing in solutions other than gas**
 - For example, geothermal systems that use the differential between outdoor temperatures and temperatures below ground to heat and cool homes
